

Our Unique Approach

The Business Protector™ portal is not just another piece of software

We Understand the Market

BPSI understands that Business Continuity Management is different in every organization. That's why we designed our Business Protector™ portal to deliver the optimal mix of features, flexibility and usability. The Business Protector™ portal combines the rich feature set, customization capability and scalability of enterprise software with the ease of use and low cost of ownership of web-based applications. Our portal solution is intuitive enough for a small organization to be able to create their first business continuity or disaster recovery plan, yet highly scalable for the most progressive, global business continuity programs. Over 20 years of experience in business continuity planning led us to create the ultimate solution: unparalleled flexibility and scalability delivered in a simple, usable portal.

Today's Business Protector™ portal provides the ultimate level of flexibility and functionality while still holding on to our "keep it simple" philosophy.

Portal Concept

Business Protector™ portal is a home for our client's mission-critical information. Our build-to-fit functionality can be switched on and off; our portal can be used to house a complex business resilience strategy with Global participation or a simple plan by a single person in a small company. We provide the flexibility to accommodate any scenario.

Software as a Service (SAAS) and Enterprise-wide Deployment

Business Protector™ is available as a service with short contact terms, flexible user access, and no infrastructure overhead to make the solution affordable to small and medium sized enterprises (SME). Our portal is also available as an Intranet solution so that the largest enterprise programs can deploy Business Protector™ to unlimited personnel around the globe.

Partnership with Our Clients

BPSI is your partner, engaging your planning goals with our tools and our expertise. If you have unique needs and technical resources in-house to develop your unique approach, our open architecture will not hold you back. You will have access to our technical staff and template design tools. If you are a small company looking to start a business continuity program, BPSI will create the most suitable platform to meet your regulatory, stakeholder and/or supply chain objectives.
