

## **IronKey Secure USB Products and Services**

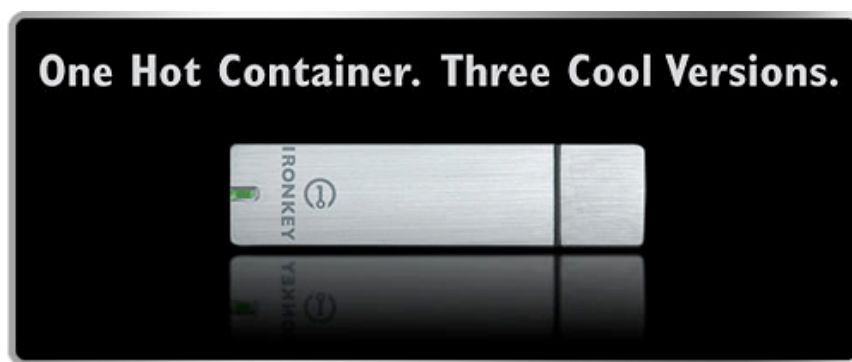

IronKey has created the world's most secure hardware encrypted USB flash drive. All IronKey devices are easy to use, and there is no need to install software or drivers.

### **IronKey Enterprise - Intelligent, Self-Defending Secure Storage**

[IronKey Enterprise](#) combines the world's most secure flash drive with enterprise-class centralized remote management. The solution allows you to easily manage thousands of IronKey devices and enforce device-specific policies. Strong encryption protects critical data from loss while intelligent anti-malware controls keep out worms and other malicious code.

### **Three Product Models**

The IronKey product family includes three product models, to meet every need: IronKey Enterprise, IronKey Personal and IronKey Basic.

### **IronKey Enterprise**

IronKey Enterprise builds on the FIPS-140-2 Validated hardware encryption, rugged design and fast and reliable memory of the base IronKey secure drive; adding remote management, configurable policies and strong authentication. If your customer's end-users need automatic encryption of their mobile data, and your customer needs to deploy hundreds of IronKeys, then [IronKey Enterprise](#) is the product to meet those needs.

For those customers who cannot use an SAAS solution for their data security needs, [IronKey Enterprise Server](#) is a reliable and highly scalable solution for managing IronKey flash drives. This robust secure software server readily integrates with existing IT infrastructure, making it easy to deploy and administer end-user drives and to remotely enforce policies. It also

enhances the security of “always-on” IronKey hardware encryption by providing enterprise-class management capabilities that include the ability to implement two-factor authentication, deploy portable virtualized desktops, and disable or wipe clean rogue drives.

### **IronKey Personal**

IronKey Personal builds on the FIPS-140-2 Validated hardware encryption, rugged design and fast and reliable memory of the base IronKey secure drive; adding secure and private web browsing and password recovery. If your customers want to safely use their data in unsecure environments, such as internet cafe computers, then [IronKey Personal](#) is the product to meet those needs.

### **IronKey Basic**

IronKey Basic product - FIPS-140-2 Validated hardware encryption, rugged design and fast and reliable memory - is for military and mission-critical enterprise environments that have strict policies regarding third-party software and connectivity. If your customers need security for their mobile data, then [IronKey Basic](#) is the product to meet those needs.
