

**FAST, SECURE,  
INTER-AGENCY EMERGENCY  
NOTIFICATION FOR FIRST  
RESPONDERS, PUBLIC SAFETY  
OFFICIALS AND MILITARY  
PERSONNEL**

MIR3 in™GovAlert™ Intelligent Notification™ addresses the communication requirements and application environments of government organizations and empowers First Responders to send high-speed emergency communications to and from any device – anywhere, anytime.

**MIR3 INGOALERT – FAST, SECURE INTER-AGENCY EMERGENCY NOTIFICATION SYSTEM**

When city, county and federal government agencies are called into action during emergencies, timely response is critical. When lives are at stake, good decision-making depends on the ability to communicate and coordinate quickly and efficiently across the various agencies and communities.

During a crisis, First Responders become gatekeepers of information; their tools for acquiring, filtering and disseminating data can contribute to the success or failure of actions in the field.

inGovAlert incorporates the robust features and capabilities that emergency situations demand. The easy-to-use interface has been specifically tailored to the hierarchical departmental structure of government and military organizations.

**THE SOLUTION OF CHOICE FOR FIRST RESPONDERS, PUBLIC SAFETY OFFICIALS AND MILITARY PERSONNEL**

inGovAlert exceeds Homeland Security specifications for an emergency communication solution and provides a proven and secure technology to organizations with GSA-schedule purchasing requirements. Additionally, inGovAlert can be deployed to address the multipurpose daily communication needs of diverse departments and agencies.

inGovAlert's role-based access control platform is founded on users' classification and security attributes. You define exactly what information and actions are available to which individuals within your organization. And, inGovAlert is compatible with all leading OS platforms, enterprise databases, GIS databases, computer-aided dispatch (CAD) systems and communication devices for rapid development and deployment. Common inGovAlert uses include:

- Government/Municipalities – Alerting First Responders for fast, efficient notification for coordinated action within and across agencies
- Homeland Security groups – Mobilizing and communicating with response teams
- Police agencies – Notifying citizens of public safety and time-sensitive information
- Military – Mobilizing and recalling troops

**BENEFITS AND VALUE TO GOVERNMENT ORGANIZATIONS**

- Incident management
- Message delivery in recipient's language and dialect
- Available as hosted and enterprise deliverable product behind organization firewall
- Unlimited devices for each user
- Secure, rapid-deploy architecture
- Streamlined administration
- Intuitive interface

PRODUCT HIGHLIGHTS

**Enterprise Access Control™**

Secure environment with password protection and recipient PIN validation

User interface tailored to the language and hierarchy of government organizations

Timely delivery of urgent communications across landlines, satellite and mobile phones, email, pagers, SMS, PDAs and fax

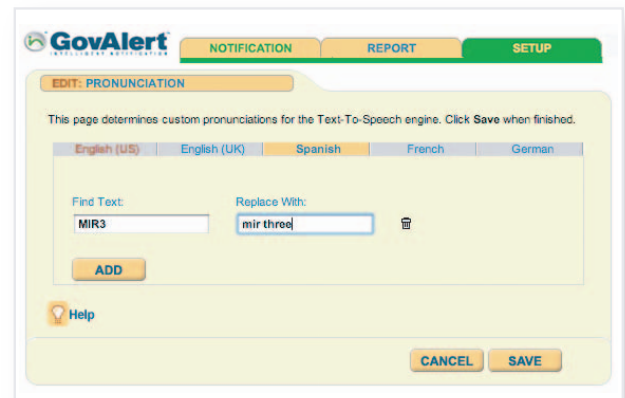

One-touch automatic call bridging into call centers, emergency lines and conference calls

Recorded voice and text-to-speech messaging
