

Asvaco™ software is an asset/resource assessment tool used by professionals and organizations to increase efficiency and accuracy during an assessment. Automates and standardizes data collection and reporting procedures, in many cases allowing for self-assessment through the easy-to-use web based application.

- **Methodology** - Modules include questions and data collection prompts, designed by subject matter experts, to support the needed end results for specific industries and circumstances. Customization available.
- **Reporting** - Automated, customizable, professional, concise and accurate executive report of findings
- **Software features** - A color coded vulnerability scale based on Homeland Security Advisory System, Photo & Video Gallery, Microsoft Documents, CAD, voice, plume & blast modeling, and GIS.
- **Application** - Client based or SaaS options available
