

Guard Tour Module

The use of the Guard Tour is a very important feature of large high risk facilities such as Government facilities, oil refineries, chemical plants, hospitals, research facilities, large shopping malls, colleges & universities. The *Site-Secure* Guard Tour device is a hand held computer and bar code scanner with a screen for instructions to the guard, which are associated with each bar code, these instructions must be performed. There is the capability of unlimited tours each with unlimited scan point locations per tour. Three types of tours can be selected, Random, Forced or Timed. In a Timed tour the device will advise the guard if he/she is late and also provide a distinct audible for a good read and bad read of the bar code. When the tour is complete the guard connect the hand held computer into its charger cradle and all the tours recorded data is automatically up loaded to the host Server for record storage and report generation.

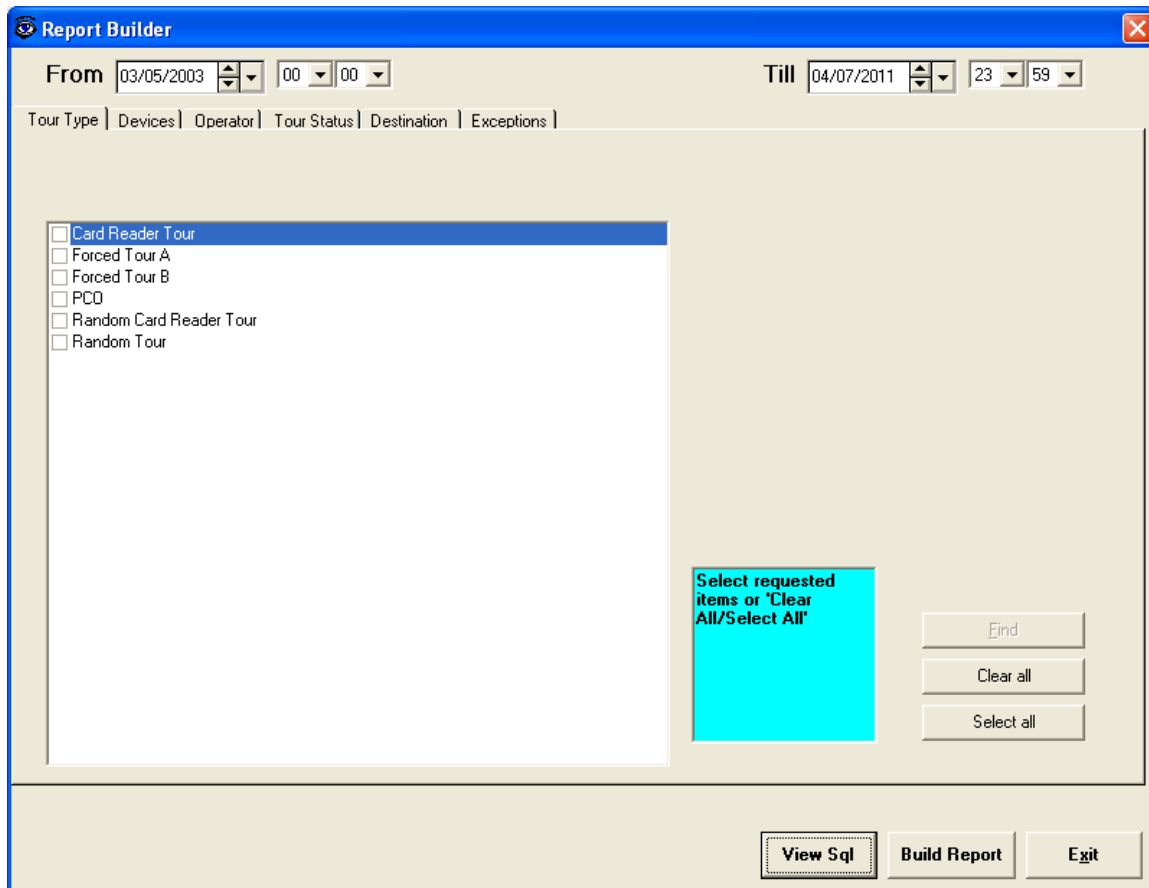

FEATURES

- Multiple tours
- Forced, timed and random tours
- Ability to insert comments to a scanned point
