

Parking Control Module

The Parking Control Module allows for the continuous tracking of vehicles within a lot or multiple lots. The control includes the issuance of parking permits, temporary permits, free parking or fee for parking, allocation of parking spaces, record of user names and up to 4 license plate numbers per user with make and color of each vehicle, plus one loaner vehicle. Track all violations such as time expired, wrong lot, vehicle towed by whom and to where, ticket issuance, value of ticket if any, ticket paid yes or no, fee for parking or permit paid yes or no. Where parking is available in multiple lots only one vehicle at a time may be parked on a single permit.
