

MOBILE PLANS. BETTER RESPONSE.

REVOLUTIONIZING THE WAY YOUR TEAM ACCESSES AND INTERACTS WITH EMERGENCY PLANS.

Organizations invest a significant amount of time, money and resources developing emergency and disaster plans. This effort is important, but does not eliminate the risk that during an emergency event these plans may not be accessible.

BYND's Plan Connect mobile application eliminates this risk by making sure that all critical plans and information are accessible anytime and anywhere without the need for internet connectivity. The application is intuitive and is easier to navigate than a paper based written plan.

Our simple, step by step, focus driven approach ensures that emergencies are managed in a systemic fashion, minimizing confusion, stress and the time required to manage the event.

A FEATURE RICH EMERGENCY APPLICATION THAT IMPROVES RESPONSE.

Auto Event Recording

An event log is automatically generated as you move through your plan. The event log can be shared, used for reference and to support reporting protocols.

Intuitive Navigation

Plan Connect has been designed to take advantage of your devices logic and functionality. Navigating your way around it is simple and easy.

Anywhere, Anytime Access

Whether you are in the office or out of the office, at home or out for dinner, within cellular or Wi-Fi coverage or outside of it you always have access to your emergency plans and critical information.

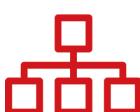

Incident Dashboard/Analytics

Completed Processes can be saved and sent to the BYND Incident Dashboard. Actions and processes can be reviewed and data such as incident type and number of incidents can be analyzed.

Multi Plan Access

With the Multi Plan Access function you can access all of your plans and resources from any screen. More importantly, you can move back and forth between multiple plans without ever losing your place. You can't do this with a written or paper based plan.

Improved Plan Consistency

The application allows us to integrate your plans in a way that provides a consistent structure when they are being navigated. Plans have a very similar look, feel and structure which helps eliminate confusion when working with Multiple plans.

Guidelines and Reminders

During an emergency with everything happening all at once, you may require further help to complete a process. The application has built in guidelines, help icons, auto confirmation and reminders to make sure that you have not forgotten anything and have executed processes correctly.

Integrated Plans

No longer do you need to look in different offices, rooms or on different network drives to access important emergency plans and critical information. All your plans are integrated and maintained in one single location, with you all the time on your mobile device.

Speech to Text Form Filling

Utilize your phones speech to text conversion capabilities with our integrated forms. This allows forms to be completed by speaking rather than typing and can save valuable time during an emergency event

Mass Notification

Should your organization utilize one of the commercially available web based mass notification services the application provides you with direct access without the need to leave the application and log in via a web browser on your mobile device.

Tenant Engagement

Enhance your tenants' ability to deal with emergencies. Ensure they have the required information to act safely and correctly when emergencies occur. Eliminate the need for paper-based manuals while making it easier for Fire Wardens to access the information that they require when and where they need it. Simplify the revision and updating process without incurring reprinting costs.

Standards Based EMP

If you don't have your own Emergency Management Plan, not a problem. The Bynd application comes with a pre-loaded EMP that uses international and national (IMS/ICS) emergency management standards and best practices. Adopting these standards and best practices ensures that your organization is better prepared to manage an emergency.
